

Advanced JEE Programming: Servlets & JSP

Inst. Hamit Pena Sierra

Final Exam

1. You must create an application that
 - a. Provides a Registration form to save new users into the database
 - b. Provides a login form and validates a given username/password against the database and, if the given credentials are ok, dispatch the request to a JSP page that shows the list of Regions stored in the HR.REGIONS table
2. The list of regions must be accessible only when the user is logged into the application.
3. For this application you must use MVC, servlets & JSP, and create the HR.USERS table on the database

When finished please send back the Java project in a zip file along with the database script used to create the USERS table using Omnivox
